Build and play / 32 finished pieces

Materials and scale

Use 11 x 14-inch chipboard on a 12 x 24-inch mat. Every backing fits a 10.7 x 13.7-inch envelope after its supplied rotation. One grid square measures one inch and represents five feet. Blade and material settings depend on the thickness and density of your chipboard.

Cardstock / printing

Upload PNGs from Cardstock as Flat Graphic / Print Then Cut. Preserve white interior areas and the transparent exterior. Enter the dimensions in the panel guide or manifest; each PNG is at 300 pixels per inch. Use Letter paper and print through Design Space so it supplies the registration marks. Each panel fits within a conservative 6.4 x 8.8-inch rectangle.

Chipboard / backing cuts

Upload the named SVG from Chipboard as Basic Cut. Check its dimensions against the guide, select a 12 x 24-inch mat and position the 11 x 14-inch stock to cover the cut. Some backing SVGs are rotated 90 degrees for the stock. Printed panels and the assembly diagrams use the map orientation.

One-image option for small pieces

For a backing with one cardstock panel, you can duplicate its imported PNG and change the duplicate to Basic Cut. If its orientation differs from the backing SVG, rotate it to fit the stock. Keep both copies at the same physical scale. The separate SVG provides the exact designed contour. Large backings use one SVG and several printed panels.

Glue and assemble

Use Backing-and-Panel-Guide.pdf to arrange the printed panels on each backing. R1C1 starts at the top left of the diagram. Match the grid across seams and glue each panel flush to its neighbor. Label the underside with the backing name and let it dry flat. Panels stay glued together during play.

Connector fit

The fit-test folder contains four tab/socket pairs with socket clearances of 0, 0.005, 0.010 and 0.015 inch. Test the complete cardstock-and-chipboard construction. Main-kit contours use zero added clearance. If your preferred fit needs a larger socket, use that result to request a contour adjustment before cutting the full kit.

Reveal and pack

Place a whole room or its named sections when discovered. Reveal corridors as the party follows them. Keep the three entrance-state strips together, Q2 inserts together, and Q3 inserts together. Store the hull flat with its ramp beside it. The complete player atlas reveals the full configuration when displayed.

Ship

The hull is one backing measuring 10 x 11.8 inches, representing approximately 50 x 60 feet. Its separate ramp meets the port hull contour. The exterior supports boarding, repairs and extraction. A future interior map can establish cabins, shared living space, storage and machinery.

Navigation and quantum states

Fixed routes

Area 1 connects south through two bends to area 2. The junction branches west to area 3 and east to area 4; those branches enter their destination rooms from the north. The low tunnel joins area 3 east to area 4 west. It is five feet wide with a four-foot ceiling.

Elevations

Matching L markers connect the lift docks, 20 feet apart vertically. Matching S markers connect the gallery stairs to their broken end over the junction: five feet of stair descent followed by a 15-foot gap. Insets have independent page positions and share north-up orientation.

Q1 / entrance

The entire hall changes state: Bright-Side > Dark-Side > Underground > Bright-Side. Its fixed southern connection persists. Keep the four floor backings in place and exchange the single mouth strip. The ship belongs to the Underground state until preserved by observation during extraction.

Q2 / lift

The three-square slab alternates between lower and upper docks. Move the slab insert and fill the vacated dock with the appropriate empty insert. The maintenance case belongs to the Upper state and is a separate token.

Q3 / traveling room

The enclosed three-square room alternates between Gallery and Deep. Its four-square physical insert includes fixed berth clearance. Exchange the occupied and empty inserts. Berth slates can display a view of the room to establish observation for recovery.

Observation

A recognizable observed part stabilizes the whole quantum feature. An ordinary blink preserves observation; deliberately looking away or closing eyes releases it. The final observer releasing a feature advances it once, followed by a fresh observation and release for another change. Tethers, occupied boundaries and blocked destinations constrain transitions.

Separate objects

Keep observing the ship while releasing Q1 to carry it into Bright-Side. Likewise, watching the case preserves it when Q2 changes. Releasing either object away from its home state while it remains on its host returns that object and its occupants home. Carrying the case off the slab or flying the ship fully clear ends this constraint.

Anomaly contact

The party receives the vision, Parted the Fabric and their GM-assigned abilities, then returns with Q3 to Gallery. Remove the anomaly token. Later Deep visits reach the empty replacement grotto. Retain the current Q1 and Q2 states; the after-contact atlas page uses B-L-G only as an example.

State atlas index

01 / B-L-G

Bright-Side; lift lower; traveling room at gallery.

02 / B-L-D

Bright-Side; lift lower; traveling room at deep.

03 / B-H-G

Bright-Side; lift upper; traveling room at gallery.

04 / B-H-D

Bright-Side; lift upper; traveling room at deep.

05 / D-L-G

Dark-Side; lift lower; traveling room at gallery.

06 / D-L-D

Dark-Side; lift lower; traveling room at deep.

07 / D-H-G

Dark-Side; lift upper; traveling room at gallery.

08 / D-H-D

Dark-Side; lift upper; traveling room at deep.

09 / U-L-G

Underground; lift lower; traveling room at gallery.

10 / U-L-D

Underground; lift lower; traveling room at deep.

11 / U-H-G

Underground; lift upper; traveling room at gallery.

12 / U-H-D

Underground; lift upper; traveling room at deep.

Backing inventory / dimensions as imported

Backing ID	Width x height (inches)	Cardstock panels
Entrance-NW	8.400 x 12.583	2
Entrance-NE	8.400 x 12.194	2
Entrance-SW	8.600 x 12.580	2
Entrance-SE	8.600 x 12.184	2
Entrance-Passage	5.435 x 9.200	2
Nest-Junction	9.400 x 8.379	2
Feeding-West	7.199 x 10.388	2
Feeding-East	7.600 x 10.383	2
Lift-Cavern	10.390 x 8.388	2
West-Passage-A	9.580 x 5.380	2
West-Passage-B	8.900 x 2.360	2
East-Passage-A	8.900 x 2.360	2
East-Passage-B	8.180 x 7.380	2
Low-Tunnel-A	1.360 x 13.200	2
Low-Tunnel-B	3.360 x 13.200	2
Gallery-West	10.580 x 9.360	3
Gallery-Middle	10.400 x 7.360	2
Gallery-East	10.180 x 8.360	2
Grotto-West	8.580 x 10.370	2
Grotto-East	8.180 x 10.367	2
Q1-Bright-Side	2.400 x 12.000	2
Q1-Dark-Side	2.400 x 12.000	2
Q1-Underground	2.400 x 12.000	2
Q2-Slab	3.400 x 3.000	1
Q2-Lower-Empty	3.400 x 3.000	1
Q2-Upper-Empty	3.400 x 3.000	1
Q3-Room	4.400 x 4.000	1
Q3-Empty	4.400 x 4.000	1
Ship-Hull	10.000 x 11.800	4
Ship-Ramp	2.155 x 1.500	1
Anomaly	3.000 x 3.000	1
Maintenance-Case	1.100 x 0.850	1
