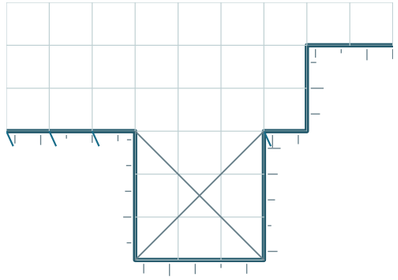
Q2 / LIFT POSITIONS

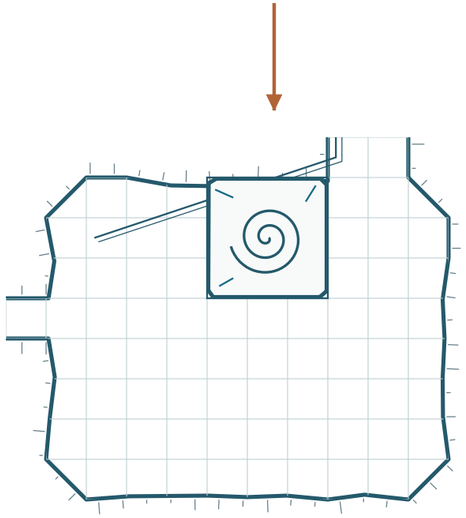
Only the 15-ft slab changes position. The cavern floor, cliff and upper gallery are fixed.

SLAB LOWER



Upper dock

Gallery floor +20 ft

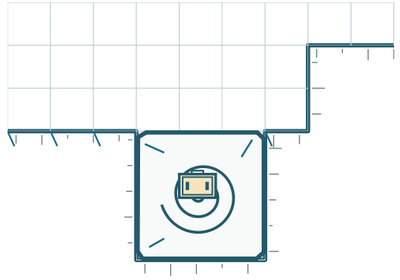


Lower dock

Cavern floor +0 ft

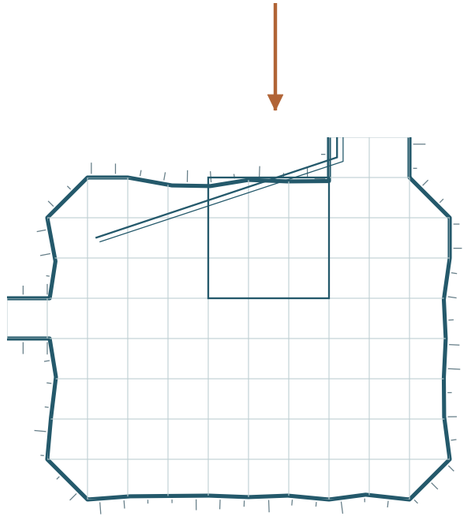
Case at home: Upper configuration

SLAB UPPER



Upper dock

Gallery floor +20 ft



Lower dock

Cavern floor +0 ft

Case at home: On the slab

Move the single slab insert between the matching 3 x 3 docks; put the empty insert in its former dock.

An upper empty dock shows a 20-ft drop. The lower empty dock is a shallow floor recess.

The case can accompany an observed slab transition when watched separately; its token tracks that exception.

Climb the fixed cliff as an alternate route. Creatures standing entirely on Q2 travel with the slab.
