Quantum Cave: navigation

THE QUANTUM CAVE

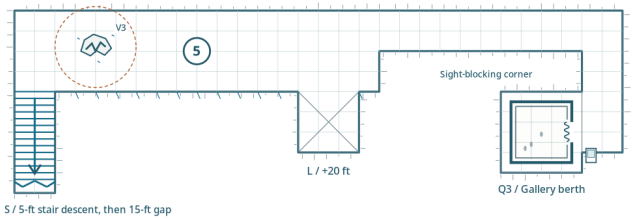

D-L-G / DARK-SIDE / LIFT LOWER / ROOM AT GALLERY

GM STATE MAP | 1 SQUARE = 5 FEET | NORTH UP

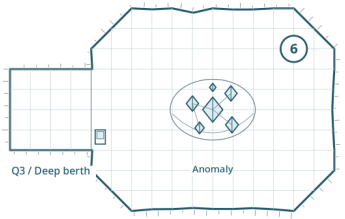

LOWER CAVE / FLOOR +0 FT

UPPER GALLERY / FLOOR +20 FT

REMOTE GROTTO / SEPARATE SPACE

CONNECTIONS

L: area 4 north dock <-> area 5 south dock

S: area 5 west stairs <-> area 2 overhead

Q3: Gallery berth <-> Deep berth

One traveling room; two receiving berths.

1 Entrance Hall 2 Nest Junction 3 Feeding Hollow 4 Lift Cavern 5 Upper Gallery 6 Grotto

Q1: Bright > Dark > Underground > Bright. Q2: Lower <-> Upper. Q3: Gallery <-> Deep.

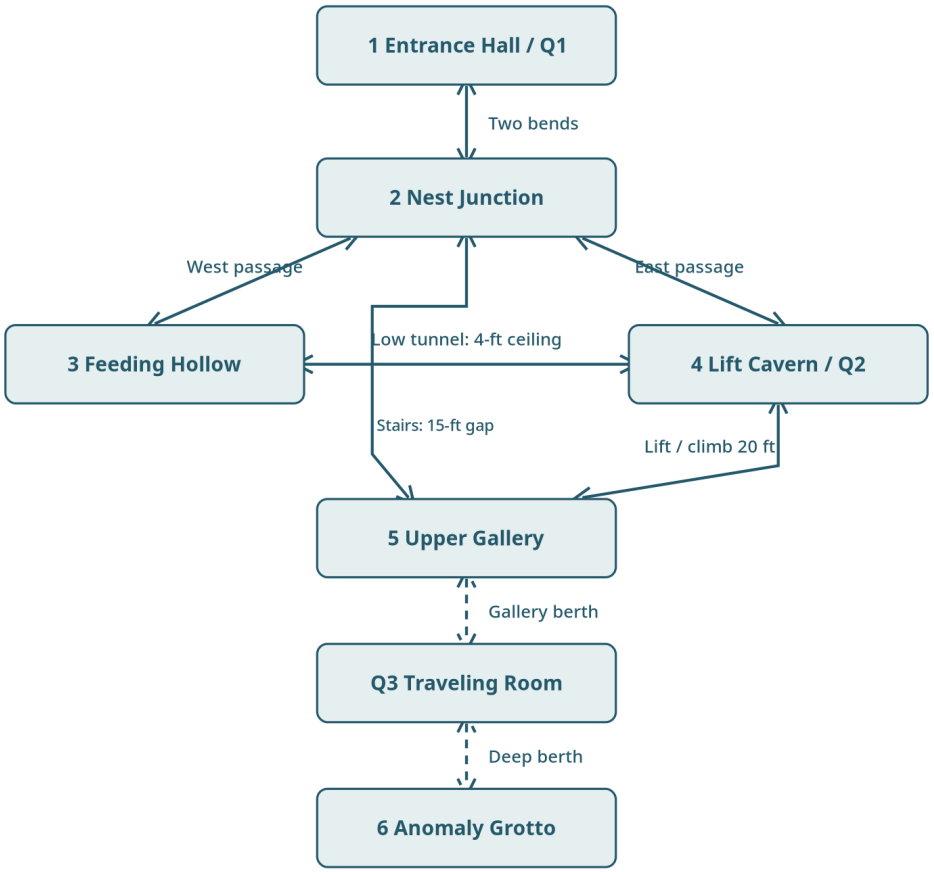

Q1-Q3: observation cycles. J / H1 / H2: movable cover; see placement sheet. Rust circles: vent bursts.

Start: Dark-Side / Lower / Gallery. Ship at Underground. OutCry IV needs settlement components.

30 ft

Start: Dark-Side / Lower / Gallery. Ship: Underground. J, H1 and H2 start at A.

Connections and quantum states

To the anomaly: 1 > 2 > 4 > 5 > Q3 > 6. Area 3 links 2 and 4.

After the vision: return in Q3 at Gallery. Descend the west stairs and rope to 2, or use Q2; then return through the two-bend passage to 1.

Q3 recovery: watch its silver seam on a berth's camera slate, then look away. The empty room changes berth when its final observer releases it.

Live tracker

Q1: Dark-Side > Underground > Bright-Side > Dark-Side. Current: _____

Q2: Lower / Upper. Current: _____

Q3: Gallery / Deep. Current: _____

Ship: home Underground. **Case:** home Upper.

Stones: J ____ H1 ____ H2 ____; each starts A.

Observation

Seeing a recognizable part holds Q1–Q3. Final observation ends: advance one state. Each new shift needs fresh observation and release. Deliberately close eyes or look away; ordinary blinking maintains the hold.

Darkvision and autonomous visual sensors count. Watched current photos and clear live feeds count. Photos become stale after a shift. One feature per observer in encounters.

Passengers entirely inside Q1/Q3 or supported by Q2 travel. A boundary-straddler, tether or unsafe occupied destination blocks the shift.

Exterior timing

Leaving Dark-Side unobserved sends it Underground; natural Bright-Side resurfacing takes 1d4+1 days. Deliberate interior cycles remain immediate in this revision.

Room reference

1 Entrance Hall • 120 × 80 ft

North: exterior. **South:** two bends to 2. White mineral boundary encloses quantum floor, walls, ceiling and opening. Landing-gear marks and boarding step identify the berth.

Dark / Bright: surface opening, empty berth at home. **Underground:** solid rock beyond opening; OutCry IV in berth, ramp down. First release from Dark sends Q1 Underground.

2 Nest Junction • 40 ft across

North: 1. **West:** north entrance of 3. **East:** northeast entrance of 4. **Overhead:** gallery stair ends 15 ft up.

Fixed buttress and exhausted vent crust. Salvage cable follows east passage. **J** moves between A/B beside the buttress. Rope on the stairs gives a direct gallery route.

3 Feeding Hollow • 70 × 50 ft

North: 2. **East:** low tunnel to 4, 5 ft wide / 4 ft high. **West:** three nests. Fixed printed buttresses. **V1:** upper western vent. **V2:** lower western vent.

One visible electrovore feeds beside V1. Further creatures can shelter in nest recesses. Eastern route skirts the vent bursts. **H1 / H2:** shifting one-square cover; start A.

4 Lift Cavern • 50 × 40 ft

Northeast: 2. **West:** low tunnel to 3. **North:** fixed cliff, gallery ledge 20 ft up. **Q2:** 15-ft-square spiral slab.

Lower / Upper. Board entirely, release slab, then watch again to hold at arrival. Yellow case appears at Upper. Fixed cliff permits climbing.

5 Upper Gallery / Q3

South: lift dock. **West:** stairs descend 5 ft, then 15-ft gap to 2. **East:** sight-blocking dogleg to Q3. **V3:** vent near stairs.

Q3: 15-ft room in 20-ft berth; east-facing door. Entire room and curtain move Gallery / Deep. Enter, close curtain, close eyes, then look again on arrival. Both berths have recovery slates.

6 Anomaly Grotto • 60 × 50 ft

West: Q3 berth. **Center:** faceted anomaly over depression. Floor and walls fixed.

Contact: whole-team vision; Parted the Fabric and assigned abilities. Return inside Q3 at Gallery. Future Deep trips reach the empty replacement grotto, with recovery slate.

Encounter, repairs and departure

Moving stones: J / H1 / H2

Each occupies one square, blocks movement through it and grants standard cover across its position. Outside combat, release of observation changes A / B.

Combat: at round start, each unstabilized stone changes to its other position. Occupied destination or a creature standing on the stone: it stays for that round.

Fix Your Gaze (1 action): choose a visible stone. Hold it through the next round-start shift while maintaining line of sight. Other actions are available. Losing sight releases it; the hold ends after the shift.

Electrovores

Small; use one-inch numbered tokens. Darkvision observes quantum features. Electricsense detects electrical activity imprecisely. Immune to electricity; fly 20 ft. Feed beside vents, investigate powered gear, retreat toward nests after feeding or injury. Use the creature note for the selected version's statistics.

Chuckle Vents

V1/V2 in Feeding Hollow; V3 near gallery stairs. Junction crust is exhausted. Warning: trembling dust, comm interference, blue sparks.

Trigger: step on crust within 5 ft, break or disturb it. **10-ft burst; DC 17 basic Reflex; 2d6 electricity.** Recharges in 10 minutes.

Survival DC 14, trained: observe safely for 1 minute to find a lull for crossing. **Crafting DC 17, trained:** 2 actions adjacent, tools and conductive scrap; discharge for 10 minutes. Failure leaves it active; critical failure triggers it. Remote crust-breaking also triggers it.

State-bound objects

Case home: Upper. Ship home: Underground. Watch the object while releasing the host's stone to carry it with the shift. Interior views and valid images count.

Release the object away from home while it remains on the host: it returns home with occupants; host stays. Carry the case fully off Q2 or fly the ship fully beyond Q1 to end the binding.

OutCry IV inspection

Stripped equipment mounts and disconnected services reveal cannibalization. Essential systems now keep Fresh-Breath habitable. Full repair depends on recovering settlement components.

Cable, case fittings and wreck salvage support partial repairs. Drift Eikon escape also needs a survivable hull and passenger support. Repair jobs and DCs remain to be set.

Back for parts: Underground > Bright-Side > Dark-Side through separate observation cycles.

Launch sequence

1. Repair and board in Underground. Watch the ship's interior.
2. Disconnect tethers, close ramp and cover exterior views. Release every observer and valid image of Q1.
3. Underground > Bright-Side; watched ship travels with it.
4. Hold ship and hall while uncovering cockpit views. Launch fully across Q1's boundary.
