

Set up the binder

The player pages do not label Jonah's disability or assume he needs someone else to make his choices.

Print the player PDF single-sided on US Letter at 100% / Actual Size.

The left margin is over 1 inch for a three-hole punch. Color bars also have written color names; the pages remain navigable in grayscale.

Place O1 first, then use the seven dividers in the listed order. IDs stay fixed. Add new pages such as P6 or C12 without changing existing IDs.

Start with O2 and P1 nearby. **Ponderer-Table-Mats.pdf** collects the trackers and cutouts. **Ponderer-FED-12-Tracker.pdf** contains just the two new carbine pages. Sheet protectors allow erasable tracking.

Before play

1. Review the sheet corrections on GM2 with Jonah.
2. Fill starting air, batteries and ammunition.
3. Put tokens in their starting positions.
4. Try one attack, reload and turn reset together.

At the table

Give Jonah the situation and a moment to choose. When he asks for an explanation, have one person answer, then point to the relevant step. Ask whether he wants alternatives before supplying several.

State the action cost, likely result and failure consequence before he commits to an unfamiliar action. Show the target and range on the map. Let him state intent in his own words; do not require the exact rules term.

Use a visible initiative list and a brief "you are next" cue. Mark enemy AC/save changes publicly when they are known. Ask Jonah which aids are useful after trying them; retire ones that add work.

Sheet and rules corrections

Make corrections on the character sheet. The player binder refers to those numbers and does not keep a second copy.

Review once	What to check on Jonah's character sheet
Attributes / skills	Confirm faint handwriting and training marks. Update skills and Perception on his sheet.
Saving throws	The photographed save totals appear to omit level from proficiency. Recalculate on his sheet.
AC / HP / DCs	The reported AC appears to omit armor proficiency. Review AC, max HP, Class DC and spell DC together. Keep corrected totals on his sheet.
Weapons / armor	Record attack modifiers and damage for each weapon. Track the suit worn and any armor penalties on his sheet.
Get 'Em!	The two-action version keeps the +1 status attack bonus. Its included Strike adds CHA as status damage; later Strikes use P1's level table even if it missed. Mine save damage is not a Strike.
Size Up	Once per hour. Asset limit equals CHA modifier. One-action Get 'Em! against an asset includes the full two-action benefit.
Digital Diversion	Needs adjacency, target's tech item, a held/worn hacking toolkit, and a free hand. The old card omits some requirements.
Hobnobber	Halves Gather Information time. One old card copied Group Impression instead. Corrected here.

Homebrew and table conventions

Confirmed homebrew, campaign conventions and how they appear in the handout.

Ponder Unity

You confirmed both saves use **Ponderer's Class DC**, reduced by applicable conditions. On the first save's critical failure, Ponderer may have the **target** roll another Will save. Failure reveals a secret; attempting the deeper read makes the target permanently immune.

These clarifications are in V6. The original vault file was not edited. A success or critical success on the deeper save reveals no secret; the initial information still applies.

The vault applies incapacitation to all of Ponder Unity; V6 follows it. **Your Thought ruling** allows repeated and readied lash Strikes, and lethal attacks without the nonlethal penalty. The weapon benefits use no daily activation.

Campaign choices retained

M-Series uses Estex statistics: STR threshold +1. Below that threshold, apply -1 Stealth/Thievery/Piloting; Flexible exempts Acrobatics/Athletics. Record the worn suit and penalties on the character sheet. Armor timing stays 10 minutes to don and 10 to doff.

Air accounting: 1 light Bulk of air gives 1 minute; 1 Bulk gives 10 minutes. C4 tracks this supply across locations. Offline Digital Assessment! has no published fixed +5 DC increase; decide from the records available.

Accessibility choices

14-point main text, stable page IDs, explicit costs and requirements, numbered instructions and separate results. Every cutout has a tracker and reset rule. Action/reaction shapes follow Tarn's cards; free-action artwork follows Gib's.

Initial inventory audit

Historical setup audit from the sheet and Session 2. Keep later changes on the character sheet.

The photographed inventory columns are empty. A handwritten line confirms **autograppler, 2 medpatches and hacking toolkit**; the combat page confirms the pistol, lash and second skin. The transcript uses one medpatch and five pistol rounds.

Known personal kit	Bulk
Pistol + lash + worn second skin + hacking kit	4 L
Two original medpatches	2 L
Autograppler	Negligible
Personal subtotal, second skin worn	6 L
After one medpatch was used	5 L
FED gear, M-Series suit carried	6 Bulk + 1 L
Combined current known gear, all carried outside	6 Bulk + 6 L

FED subtotal: carbine 2 + cutter 1 + survival roll 2 + carried suit 1; comm L. Swapping which armor is worn gives the same combined total. Null module, GhostBox and ordinary ammunition are negligible. Sample claim kit Bulk is undefined; shared tools and loot are excluded.

All known gear outside: **6 counted Bulk, encumbered**. Store the spare armor in the null module: **5 Bulk + 6 L**, counted as 5, within his limit. Adding a 1-Bulk crew medkit then makes it 6 again. Confirm actual storage locations.

Ammunition: 10 rounds cost 1 credit. No purchase has been made and no rounds or magazines have been added. Confirm starting loaded/reserve counts; offer ammunition in clearly labeled 10-round packs. A spare magazine's separate price is not specified here.

Session 2 checkpoint and sources

Pistol bullets used	5 : gunfire Aid; ordinary shot; Get 'Em! shot; two final-round shots. No reload is stated.
Current loaded bullets	5 only if he began with 10 loaded. Reserve count is unknown.
Medpatches	Began with 2; used 1. Expected remaining 1. Its +1 item bonus to poison/disease saves lasts 10 minutes from use.
HP / conditions	Last spoken HP: 2 . Stupefied 1 from nitrous. His affected tech gear is glitching 1; he is not personally a tech creature. Confirm with the table before prefilling.
Air losses	At least 12 minutes explicitly charged: 10 on suit recovery, 2 drawing the pistol. Another retrieval occurred without a clearly stated charge. Starting air is unknown.
Clock	GM-approved endpoint: about 30 minutes after the crash. Next diluted-atmosphere save is about due.

Authority used

Published rules: supplied Starfinder 2e Player Core, plus Archives of Nethys 2e pages and Paizo's FAQ/errata, checked 9 October 2026. Bon Mot uses Pathfinder Player Core 2 p. 228 with your express approval.

Campaign: current Fonqugon.md, Heritages.md, Ponder Unity.md, Nitrous-Oxide Atmosphere.md and FED_Equipment_Cards.json. Character sheet photos and the Session 2 transcript establish character choices and expenditure.

Source priority: your corrections and current vault homebrew take precedence over older cards or published ancestry material. The player binder paraphrases the rules; no additional feats, purchases or inventory changes were made.

Editing and expansion

Use **Ponderer-Editable.html** for readable editable text, or edit

binder-content.json and run **build_binder.py** with Python, ReportLab and PyMuPDF. Each page is explicitly defined. Add a new ID without changing the old ones; update the contents/index if needed.

On level-up or a gear change, update the character sheet. Existing pages use its modifiers, DCs, defenses, damage and Speeds. Add pages only for new procedures or equipment rules; keep the page IDs. The index can be annotated by hand. Use pencil or erasable pen for tracking.
