

Track pistol ammunition

Set up: one LOADED token per bullet in my pistol; remaining tokens go in SPENT.

LOADED — ready to fire

SPENT — return tokens here after firing

Reserve ammunition: _____ bullets

Fire

Move 1 token per pistol shot

- ❶ Move 1 token **LOADED** → **SPENT**, hit or miss. Include shots within other abilities.

Reload

❖ **1 action • free hand + reserve ammunition**

- ❶ Return SPENT tokens to empty LOADED circles, up to 10 loaded or my available reserve. Subtract that many from reserve.

Reuse tokens each reload. Manipulate: may trigger reactions; grabbed needs flat DC 5. Keep counts between sessions.

FED-12 battery tracker

Installed battery ID: _____

Set up: 1 CHARGED token per charge remaining; rest in SPENT. Fill pairs first. Full battery: 10 charges / 5 shots.

CHARGED — each pair powers one shot

SPENT — used or empty charge spaces

Fire: move **2 tokens CHARGED** → **SPENT** per shot, hit or miss. Each filled pair is one available shot. Advance NEXT ATTACK (C8).

Reload: swap the battery

❖ **1 action • free hand and replacement battery**

- ❶ Record the removed battery's remaining charges on C11. Put in the replacement and write its ID above.
- ❷ Set the tokens to that battery's remaining charges. Put leftover tokens in SPENT.

Grip changes are included. Manipulate: may trigger reactions; grabbed requires flat DC 5. Keep the counts between turns and sessions.

My turn tracker

Start my turn: actions → AVAILABLE; reaction → READY; NEXT ATTACK → FIRST. Conditions can reduce my actions.

Actions

Reaction

Directive

NEXT ATTACK — shared by all attacks

Actions: move one token to USED per action spent. A two-action activity moves two tokens.

Reaction: move to USED when spent. **Directive:** move to ISSUED when used; reset at the GM's new-round cue.

NEXT ATTACK: advance after every attack, hit or miss, including Escape. Stay on THIRD+ afterward. All weapons share this count.

Effects and spare tokens

Set up: park all seven effect / asset tokens on the left. Move each token to its tracker when used; SIZED UP tokens go on Y1.

PARKED

Get 'Em!

Target: _____

+1
ATTACK

To hit

DAMAGE

Later Strikes: see P1

Digital Assessment!

Target: _____

+1
AC

Against this target's attacks

Bon Mot

	Affected person	Penalty	Ends at
BON MOT	_____	_____	_____
	_____	_____	_____
	_____	_____	_____

Clear each effect when it ends (P3). Park token when all end.

Start my turn: park the Get 'Em! and Digital Assessment! tokens; erase those targets. Keep assets on Y1. For extra Bon Mot targets, use another copy of this tracker.

PONDERER • TABLE REFERENCE

Circle one digit in each row with pencil or erasable pen. Read them together: **2 then 3 = 23 minutes**. Update when air is used, lost or replenished.

Air volume	Breathing time
1 light Bulk	1 minute
1 Bulk (10 light)	10 minutes

Use or lose air

Track the amount in whole minutes

- 1 Subtract the number of minutes I spend breathing from this supply.
- 2 If air escapes when I open the chamber, subtract the loss the GM gives me in minutes.

Replenish the supply

Access to breathable air

- 1 Confirm the amount replenished with the GM. Update the tracker to the new total.

Stored equipment reduces the room available for air. Use C5 to calculate the chamber's remaining capacity.

Current refill capacity: _____ minutes

Size Up someone important

Size Up

Once per hour • exploration

- 1 Choose a method: **observe 1 minute**, **research online 10 minutes**, or **network 1 hour**. Research and networking need two identifying facts approved by the GM.
- 2 After that time, write the person below and place a SIZED UP token. My asset limit equals my **Charisma modifier**. At that limit, a new asset replaces one I choose.

Concentrate: needs focus. Size Up itself requires no check. Mark when I can start it again.

Against or about an asset: +1 circumstance to Deception, Diplomacy, Intimidation, Perception and Recall Knowledge. Lead by Example costs **1 action total**; follow P1's full procedure.

ASSET 1

Name: _____

ASSET 2

Name: _____

ASSET 3

Name: _____

Next Size Up available at: _____

Keep each token here while that person is an asset. Park unused SIZED UP tokens on C9.

Additional assets: _____

Use these lines if I have more assets than tokens.

Cutout tokens

Print at **100% / Actual Size**. Each token is ¾ inch across and fits its matching tracker circle.

Turn tokens → C8

Ammunition → C3

Effects → C9 / assets → Y1

Destinations: turn tokens → C8; bullets → C3; bonuses / BON MOT → C9; SIZED UP → Y1. Park unused bonus and asset tokens on C9.

Carbine tokens and batteries

Print at **100% / Actual Size**. Cut around the ten ¾-inch circles. Use these tokens on C10.

Keep this battery log below the cutouts

Give each battery I own a letter or name. Record its charges when I remove it. Mark its location: **carbine, pack or null chamber**.

Battery ID	Charges left	Location
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

Installed battery: the tokens on C10 show its current charge. Update this log when I remove it.

Recharging: increase a battery's recorded charges when charging is completed. Confirm the available power source and charging time with the GM.

Odd number of charges? Keep one unpaired token in CHARGED. Firing requires two charge tokens.
